

# Year One

## Science

Our topic this term is "Everyday Materials" and so far the children have had the opportunity to investigate the feel and weight of different materials, discuss their properties and develop the vocabulary for describing and comparing materials.

The children learnt how to sort different objects according to the properties of the material they were made from and, in the process, learnt that different objects can be made from the same material, e.g. a car, spoon and scissors can be made of metal.

After half term the children will be carrying out investigations, testing materials such as paper and fabric, in order to compare their differences.
