

Year 1

During Design and Technology this term we have been looking at playground equipment and exploring how the different equipment is made and how it works. We looked at slides, see-saws, roundabouts, climbing frames and swings. We took a particularly close look at the design and the construction of swings and thought about how the construction stands, what keeps it safe and still in the ground and how it moves. Over the past few weeks we designed our own equipment and thought about the materials we would need to make it.

Here are some of our finished designs!
